

Alabaster

St. Leo alabaster elements are crafted from natural stone, selected for its unique veining and translucency. Variations in tone and pattern are inherent to the material itself, making each piece distinct. The stone is shaped and honed by hand to reveal its natural character.

When illuminated, alabaster emits a soft, warm glow that brings forward the depth and quiet presence of the material. Natural veining, tonal variation, and occasional fine fissures may be visible, contributing to the character of each piece.

For regular care, gently dust with a soft, dry cloth. If needed, a slightly damp cloth may be used. Refrain from using abrasive materials or strong cleaning agents, as these may scratch and damage the surface. Always disconnect power at the circuit breaker or fuse before cleaning.
